

Information Security Policy

Devices

All company devices must have full-disk encryption, screen lock, and the endpoint security agent installed. Do not install unapproved software.

Accounts

Use a password manager for all credentials. Enable multi-factor authentication on every account that supports it. Never share credentials.

Data handling

Classify data as public, internal, confidential, or restricted. Do not store restricted data on personal devices or unapproved cloud services.

Reporting incidents

Report lost devices, suspected compromise, or phishing attempts to the security team immediately via the incident channel.
